Work Experience

SnapLogic — Fullstack Engineer (Senior UI Engineer) **Feb. 2025–April 2026**
Remote (California) — contracted Feb.–Dec. 2025, converted to FTE

- Built a navigable file tree displaying integration complexity in scoped dashboards, handling thousands of files with lazy loading and ∼25 ms response times (down from ∼325 ms) via path compression, Redis caching, and lock-based concurrency control across Django and Celery workers; used OpenTelemetry tracing to diagnose bottlenecks
- Replaced a manual engineer-driven onboarding step with a self-service upload flow (S3 + async Celery task processing) with real-time status updates and structured error reporting
- Structured feature work around versioned technical proposals (RFC/ADR-style), giving well-scoped problem definitions, documented trade-offs, and current decision context
- Designed a typed event system — generated from the data model via codegen — with shared contracts spanning Python, Jinja, and JavaScript, so entity changes propagated to the UI automatically without client-side state
- Chose Django + HTMX + Web Components over a separate SPA/API stack on a 3-engineer team, delivering SPA-like interactivity through server-rendered views with lazy loading and partial updates
- Built a parallelized Playwright suite with accessibility-first locators, enabling daily deployments and major refactors while keeping tests decoupled from markup

Inabia — Next.js Developer **Jan. 2024–Sept. 2024**
Remote (California) — Contractor at Consumer 51

- Led frontend development of a HIPAA-compliant clinical workflow system with real-time critical alerts and threshold-based validation, mentoring 2 developers on React, Hooks, and TypeScript
- Improved data integrity in the patient records API (Laravel) by replacing loosely typed fields with structured schemas (e.g. boolean → decimal amount + enum unit) and writing migrations and request validators
- Eliminated recurring regressions in form validation logic by establishing the team's testing practice; authored Jest/RTL integration tests, created examples, and led team training
- Reduced API response times by 75% by parallelizing data fetches and eliminating over-fetched relations from patient page layouts

Encore — Full Stack Developer **May 2022–April 2023**
Financial services startup — Remote

- Developed reusable multi-step funnel components and hooks, adopted as the standard pattern across payment, invoice, team, and workspace onboarding flows
- Built KYC and payment onboarding flows integrating Stripe Identity verification, Plaid bank account linking, and SSN validation with input masking
- Hardened authentication with Redis-based rate-limiting and magic-link sign-in
- Reduced runtime errors across the platform by driving a JavaScript-to-TypeScript migration and configuring strict ESLint rules

Open Source

Ratatui
Rust TUI framework

- Identified and fixed a rendering issue affecting layout behavior at small terminal widths and submitted documentation improvements

Volunteer

Radical Engineers **March 2022–August 2023**
Software Engineer

- Built a Twilio phone-tree app (Python/Flask) enabling automated call routing for criminal justice nonprofit; designed and developed a workplace accessibility survey app (React/TypeScript/NextAuth) for UK nonprofit Sic in the City

Personal Projects

International Clock — Rust service on AWS Lambda (tokio, tower-http, tzf-rs) resolving coordinates to time zones in sub-2 ms; React/TypeScript frontend on S3/CloudFront via GitHub Actions — clock.raffaelecataldo.com | source

ruhr — Rust CLI world clock using async HTTP (tokio/reqwest) to query Nominatim, with SQLite caching and user-defined location aliases, published on crates.io — github.com/farmeroy/ruhr

Technical Skills

Languages: Python, TypeScript, Rust, JavaScript
Backend: Django, Celery, Redis, Node.js, Express, Axum
Frontend: React, Next.js, Web Components, HTMX, Playwright, Jest, React Testing Library
Data & Tools: Postgres, MongoDB, Git, GitHub Actions, Docker, Linux, AWS, OpenTelemetry, Claude Code

Education

The Open University *expected 2028*
BSc Honours Computer Science and Statistics

Languages

English (native) | German (advanced) | Spanish (advanced) | Italian (intermediate) | Turkish (intermediate)
